

Panoramo CCTV Camera

vwns.enquires@veolia.com

Veolia over the past 4 years invested heavily in maintaining our competitive and technological edge across the industry. This has seen Veolia invest in new, innovative technology in the area of condition assessment with the introduction of the 360 degree digital 'Panoramo' technology.

Veolia is one of only two companies in Australia to offer this Panoramo technology.

The Panoramo technology allows the viewer to move freely in the pipe without any view restrictions. It enables the viewer the ability to stop at any position in the pipe, pan by 360°, zoom, look into inlets and even look backwards – all this, without interfering with the recorded graphical material. All objects such as displaced joints, protruding pipe connections etc. can thus be viewed in detail from all sides.

This puts Veolia ahead of the rest when you're considering complete condition assessment of your drainage or sewerage network.

Veolia has 2 fully operational Panoramo camera units available.

Panoramo Key Features:

- » Complete viewing of the pipe from every angle
- » Full 360 degree viewing
- » Full colour digital high quality film and still pictures
- » Guarantee pin sharp images during inspections
- » Enhanced camera speed – up to 35 cm/sec
- » Gives the viewer full virtual reality touring
- » Picks up every minute detail in the footage
- » 'Unfolded' view options available of the pipe
- » Used for 150 mm diameter pipes or bigger
- » All details such as inlets, pipe joint displacements can be viewed in complete detail
